

DENSO POWER 0° An invisible solution for Refrigerated Transport of goods

Power 0° is an invisible refrigeration unit in a temperature range of $+0^{\circ}\text{C}/+10^{\circ}\text{C}$ in ATP conditions, designed for the transport of special goods for Small and Medium vehicles with a cargo room from 3 to 12 m³.

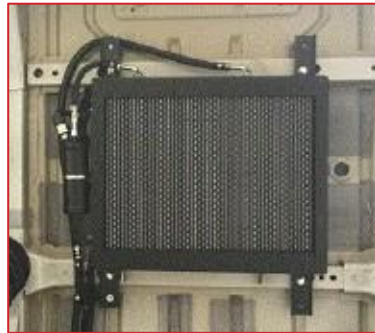

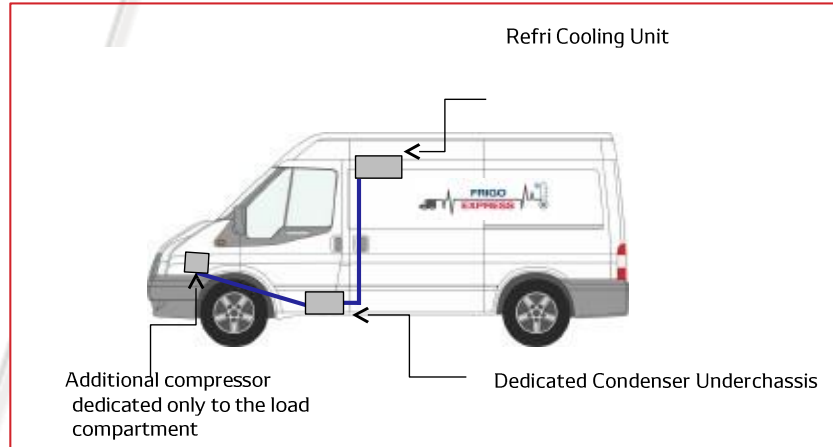

The product is suitable for the transport of special goods or food, following the current European legislation and it is characterized by the absence of external encumbrances on the vehicle, not impacting in any way on its appearance.

DENSO

Crafting the Core

POWER 0°

It is a completely independent system from the vehicle with a compressor, a cooling unit and a condenser under the dashboard, dedicated to **SMALL & MEDIUM** vehicles (cargo room from 3 to 12 m³) working in a continental/warm climate, always with an insulated cargo room.

The system ensures an easy assembly with a complete assembly kit (**PLUG & PLAY SOLUTION**) and guaranteed **OEM quality** standard (Denso approach). Power 0° uses a dedicated **Cooling unit**, **the best in class of the category** for its small dimension (only 12,4 cm of height). The unit is controlled by a multifunctional digital panel with an **integrated data logger** ensuring a real-time recording of the temperature and the download of data by USB.

The condenser under the dashboard uses the **Denso brazed cores technology** for external use. All the components are protected by a metal grid.

Power 0° has the **ATP homologation** and it can be used also for the transport of food.

Denso Power 0° will be supplied (as optional) with the connection to **Denso Pharma Connect** to monitor remotely the geolocation and the temperature of the load compartment.
